

PHOENIX

PRESSURE CONTROL PC-A3

- ✓ Three pressure reducers with manometer set the pressure in each loop
- ✓ An additional pressure gauge shows the available system pressure

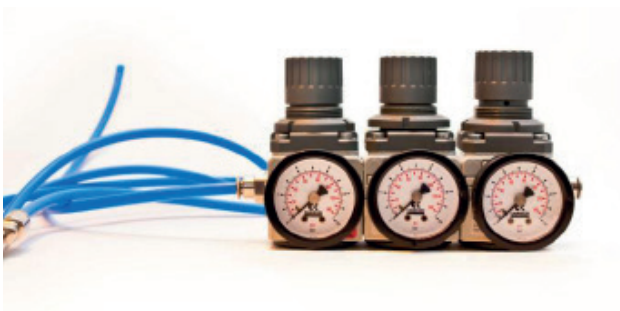

Scope of application

The pressure control of PC-A3 is used in connection with air spring mounts (e.g. type Alivio 2000) and sets the required pressure in each control cycle. Normal pressure losses in the mounts are compensated automatically.

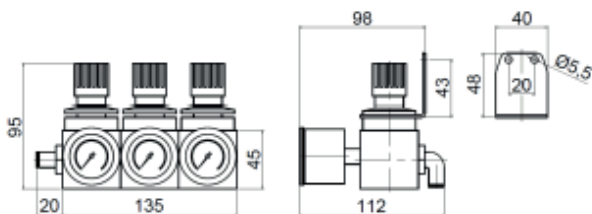

Mode of action

With the help of the pressure reducer the system pressure is reduced, so that the operational height is obtained. Observe mounting instructions of the air spring items. Improper use will damage the mounts!
